Description	
Deposit: Compaction, colour, composition, particle size, inclusions, thickness and extent, comments, method & conditions	floor situated in the southern part of space 1. It is rather compact to excavate in some areas, primarily in the west, and at others the compacted soil falls naturally off when travelling to the next floor level. the surface of the floor is uneven and in some areas dug through and has therefore not been fully traced. <u>soil</u> - light yellowish grey colour with some darker patches in the eastern part of the locus. - texture is silty clay - inclusions: charcoal sporadically, limestone/gypsum powder also appear - mineral reacting 10YR 6/3 or 6/4 - was 100% sampled for flotation Excavated with trowel, hand pick and patience
Cut: Shape in plan, corners, dimensions/ depth, break of slope at top, sides, break of slope at base, base, orientation, inclination of axis, truncated (if known), fill #'s, comments	
Layers: Compaction, colour, composition, particle size, inclusions, thickness and extent, comments, method and conditions	
Walls: Shape in plan, dimensions, orientation, construction method, construction material further description
