Description			
Deposit: Compaction, colour, composition, particle size, inclusions, thickness and extent, comments, method & conditions	Context is situated in SE corner of the trench. It is a fill deposit of cut <u>[5006]</u> , which was backfilled by P. Smith. measurements: <u>90 x 54 cm</u> thickness: <u>14 cm</u>		
Cut: Shape in plan, corners, dimensions/ depth, break of slope at top, sides, break of slope at base, base, orientation, inclination of axis, truncated (if known), fill #'s, comments	<u>Soil</u> - pale brown in appearance with a hint of grey - loose and easy to remove with trowel - Munsell reading: <u>10YR 5/3</u> → brown - clayey silt - Inclusions: stones, charcoal, grit, shell		
Layers: Compaction, colour, composition, particle size, inclusions, thickness and extent, comments, method and conditions	Some stones about fist size were removed - drawn into sketch on page 2 Plant roots observed → post depositional disturbance Excavated with trowel and hand pick		
Walls: Shape in plan, dimensions, orientation, construction method, construction material further description	All the soil was sieved, which revealed a few bones and chipped stones. Excavated until bottom of the cut was reached → a more compact, plaster like surface. <u>deposit</u> Plastic from former excavation was also revealed in the southern part of the Context
